Science Experiences That Come to You™

## Assembly Type Programming

These programs are for schools requiring a one morning/afternoon or one day assembly type program with a large group of children. You can do one program for the entire school or break the school down into smaller groups to do the one program, like:

Group one -- Kindergarten and First Grade

Group two -- Second and Third Grades

Group three -- Fourth and Fifth Grades

You can even break them down into 6 groups, one for each grade. If the groups are small enough we will be able to get one activity into everyone's hands.

The Programs are:

**Science is Fun** -- This program is comprised of various fun science topics that run the gamut with a strong concentration on gas pressure.

**Catch the Wave** -- The light and sound wave that is. Some cool light and sound activities make this a really fun adventure.

**Franklin's Playhouse** -- All about electricity and magnetism with the ever-popular hair raising experience from a Van de Graaff generator.

**As a Matter of Fact** -- Solids, liquids and gases and some of their properties play the central role in this science assembly.

**Come Fly with Me** -- From Bernoulli to Cape Canaveral we'll talk all about the wonders of flight!

**Isaac's World** -- Enter the world of energy and motion, the world of Isaac Newton, Albert Einstein and Stephen Hawking -- the glamour topic of science.

**The cost is \$325 for one 50 minute program plus \$75 for each additional group. So, if you do six groups, the cost would be \$300 plus \$75 times five for a total of \$700 for six 50 minute programs.**
